Excellent project based real-world experience and brilliant networking opportunities. Mixed teams will compete for a prize!

TEAMBUILD: The Construction Challenge

is a unique cross disciplinary competition for students training towards a career in the construction industry. Teams will be challenged by fictional tasks based on a real site in Historic Edinburgh, testing their collaboration and communication skills to the limit and getting essential feedback and networking opportunities from/with invited guests and participants from the construction industry.

TEAMBUILD: The Construction Challenge

is a two day event based at Edinburgh College of Art during Innovative Learning Week 2014 (18th - 19th February 2014).

TEAMBUILD: The Construction Challenge

is looking for students of architecture, engineering, project management, quantity surveying and real estate from University of Edinburgh and Heriot Watt University to participate.

Register for participation at www.teambuilduk.com

18th - 19th Feb 2014

TEAMBUILD The Construction Challenge

www.teambuilduk.com

Holyrood Student Accommodation project is the basis for the competition

Teambuild has been running for 20 years as a competition for graduates in Industry, but this is the first event for students. Sponsored by RICS, RIBA, CIOB, CIBSE, ICE and IStructE, among others. The event is held in high esteem by these institutions and counts towards Chartership experience and CPD.

To participate in this event, please register your interest at www.teambuilduk.com, as soon as possible. You will be allocated to a small multi-disciplinary team, of 6-8 students from different disciplines and given your first task: to decide your team name and brand your team!

The main event takes place over two days. This will mainly take the form of quick-fire design stages where all of your team must work together against the clock. The itinerary will include a site visit, personal input from industry leaders, and direct feedback on your presentation skills. A full itinerary will be sent to all qualifying teams.

There are **5 stages** to the two day event:

Stage 1: Development brief

Stage 2: Outline design

Stage 3: Procurement strategy (Contract and Risk)

Stage 4: Detailed design

Stage 5: Construction, Handover and Operation

Each profession will have something different to offer at each stage: don't worry if this takes you out of your comfort zone or your area of knowledge- that's the point! Working together as a team these exercises will take you through the whole process of making a building. You will end the exercise much better-prepared and informed to tackle similar situations in your professional career- and with a heightened respect for the skills of your co-professionals!

Professional attire and conduct is expected of participants throughout the competition. Our judges are respected industry professionals, and will be present throughout the event observing the teams at work, and responding to formal presentations from each team at each stage. There will be several opportunities for formal and informal networking.
